Kerr™

Innovation Symposium

2024

THE BELFRY
HOTEL & RESORT

Sutton Coldfield,
20th - 21st September 2024

Shaping the Future of Oral Health

Join us at the Kerr Innovation Symposium for a full day of hands-on sessions and lectures designed to elevate your dentistry innovation journey. With three tracks led by renowned speakers, including restorative and endodontic workshops, modern hygiene methods, and inclusive amenities, this event is your pathway to the next level in your career.

Prof. Philippe Sleiman

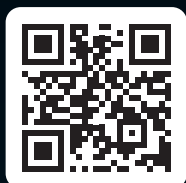

Dr. Jordi Manauta

Demi™ Plus

Light Emitting Diode (LED) Curing Light

Thanks to the PLS technology, Demi Plus intermittently shifts the output intensity from a base of 1,100 mW/cm² to a peak of 1,330 mW/cm². This enables the Demi Plus to deliver a 5-second cure for A3 or lighter shades.

Enhanced Body Design

This curing light's exterior is made from Valox resin, a high-performance plastic that will protect and extend the life of your unit. In addition, the upgraded closed housing allows for easier cleaning and disinfection. Improved Cooling System and fan free for quiet operation.

True 5-second cure

Consistent output of Periodic Level Shifting (PLS) delivers a true 5-second cure for composite shades A3 and lighter.

Never shuts down

Whisper-quiet fan and unique thermal control system keeps the unit cool for uninterrupted operation. Extends the overall life of the unit.

Advanced battery technology

The lithium-ion battery technology can yield 300 10-second cures with a single charge.

Lightweight, ergonomic design

Multiple holding options reduce hand and arm stress.

OptiDisc™

High Performing Polishing and Contouring Disc

OptiDisc™ finishing and polishing discs allow you to obtain a final polish equal to that of natural dentition on all kinds of restorations. Made of durable polyester impregnated with aluminium oxide particles, the four grit system achieves a long-lasting result. A colour-coded system enables immediate identification of the grit type.

AVAILABLE IN THREE DIFFERENT DIAMETER SIZES

SimpliShade™

Simplified Universal Composite System

Simplify Shade-matching

Shade selection made easier and faster. SimpliShade matches all 16 VITA classical shades with just 3 shades: Light, Medium, Dark.

Adaptive Response Technology (ART)

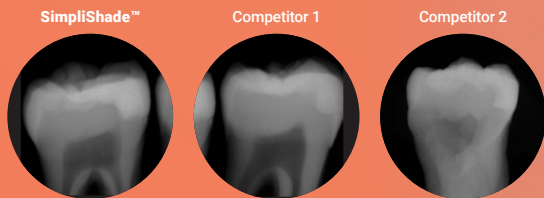

The ART filler network, a proven technology found in Harmonize, helps you achieve lifelike restorations with exceptional strength and unmatched esthetics.

Streamline Inventory Management

Save time and money with minimal shades to meet almost all your composite needs. Declutter your shelves, avoid the burden of re-ordering too many different part numbers, and reduce or eliminate expired products.

Universal For All Cavity Classes

Use SimpliShade with confidence in all cavity classes without the need for a blocker, unlike other competitors.

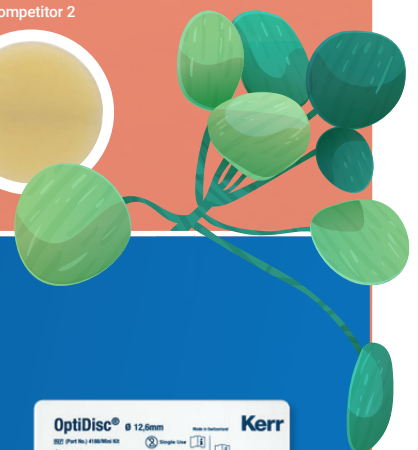

Excellent Radiopacity

The more radiopaque, the easier it is to distinguish the restoration from the tooth structure under a radiograph. SimpliShade at 300% AI is almost twice as radiopaque as competition.

Optimal Translucency

SimpliShade provides ideal opacity to mimic tooth structure, to better mask underlying tooth stains, and blend well with surrounding dentition, resulting in a more lifelike restoration.

SimpliShade™ BULK FILL & BULK FILL FLOW

ONE SHADE IS ALL IT TAKES

Single-shade Simplicity meets Superior Adaptability

Beautiful restorations just got simpler, with SimpliShade™ Bulk Fill and SimpliShade Bulk Fill Flow. Skip the capping layer with a one-step placement and reach every area of the tooth's anatomy – with exceptional durability and depth of cure. Requiring just one shade to match all 16 VITA® classical shades, SimpliShade Bulk Fill and Bulk Fill Flow reduce inventory requirements while saving you time for your patients.

ART³: A NEW WAY TO BULK FILL

SimpliShade™ BULK FILL

One Step

Eliminate the need for a capping layer, complete restorations with a SingleFill™ composite. With its enhanced curing mechanism, SimpliShade Bulk Fill makes it easy to achieve polymerization depths up to 5mm in a single step.

Simplicity with Durability

SimpliShade Bulk Fill offers low wear rate, high flexural strength, and comparable shrinkage stress relative to other bulk fill brands on the market, keeping your restorations stronger and long-lasting.

Chameleon Effect

Special nanofiller architecture mimics the natural enamel structure and interacts with light for virtually indistinguishable blending.

SimpliShade™ BULK FILL FLOW

Save Time

Simplify your workflow with just one step to cure up to 5 mm, before adding a capping layer.

Go with the Flow

Fill every area of the tooth's anatomy with a self-leveling bulk fill flowable that easily adapts to the cavity floor.

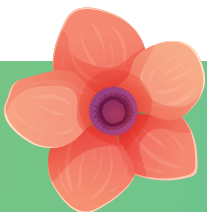

Low Shrinkage

The low polymerization-related shrinkage and shrinkage stress of SimpliShade Bulk fill Flow ensure long-lasting restorative results.

Add Confidence

Restore confidently with a flowable bulk fill composite that offers comparable or higher mechanical strength than the competitors.

elements™ Connect – perfection in every detail

Dr. Maciej Mikołajczyk DDS, PhD is a senior Assistant in English Dental Division of Medical University in Lodz, Poland. Author of 5-time book series “Endodontics in dental practice” and author and co-author of multiple scientific papers and lectures concerning minimally invasive adhesive dentistry, use of lasers and microscopy in dentistry. He works in his own private practice in Lodz, specializes in esthetic reconstructions of teeth and lectures in many European countries.

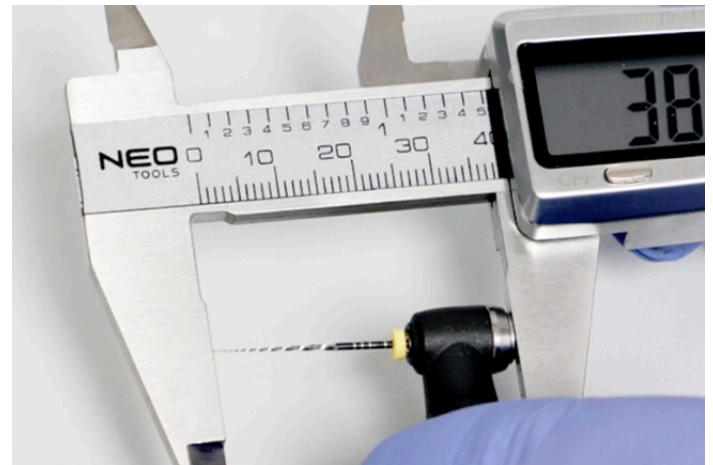

Elements Connect is a cordless Endomotor with a set of quite unique features to make every day work of the endodontist on root canal preparation easier.

One notable feature to highlight initially is the excellent ergonomics of the device. The motor is lightweight and very well balanced. It fits the operator’s hand stably, without causing any muscle strain, joint tension, or fatigue.

The grip has been shaped to make maneuvering the handpiece in the patient’s mouth as easy as possible. The unique profile of the handpiece’s surface offers excellent support for the fingers during preparation and vertical movements.

The large, contrasting and ergonomically located screen enables continuous observation of the operating parameters of the endodontic file. It also allows for precise control of the torque and position of the file within the canal, while simultaneously offering the option to activate auto-reverse or auto-reverse/stop programs after reaching the limit parameters for a given endodontic file system.

In my many years of practice, I have never worked with such an ergonomically well-designed endodontic motor that puts so little strain on my hand during the preparation of root canals.

The size of the head of the device, with an inserted endodontic file, is among the smallest in its class of devices, yet the design of the head itself provides a solid grip for any standard endodontic file. The handpiece has been designed in a way that allows for maximum control over the torque, RPM and the range of rotation angles. This level of control is particularly important when working with reciprocal and adaptive motion, both possible with elements Connect. Changes in angular value and rotation direction occur multiple times per second during file movement and must be executed in a repeatable and fully controlled manner.

I use two lengths of Zenflex files in my practice. When working with them and the elements Connect micromotor, I encountered no difficulties accessing any root canal, regardless of the tooth’s position in the patient’s mouth.

The built-in ability to work with an external Apex Connect endometer enhances the root canal preparation process by providing continuous control of the endodontic file's position in relation to the apex of the root canal. Additionally, Apex Connect is a fully functional endometer that enables precise determination of the working length using manual canal tools during canal negotiations before rotational preparation begins.

When connected to elements Connect, it allows for continuous monitoring of the file's position in the canal during canal preparation and activation of the auto-reverse program upon reaching the working length.

I like the versatility of combining an endometer and an endodontic micromotor. This combination offers the usability and ergonomics of a free-standing endometer while providing continuous control of the working length during root canal preparation when connected to the motor.

The built-in programming module has saved operating parameters for reciprocal movement, adaptive movement, and all Kerr endodontic file systems. All settings are quickly accessible with a single press of a button, and they can be easily modified in any way as needed. Additionally, regardless of the saved file systems, it's possible to program operating parameters for any endodontic files available on the market, whether rotary and reciprocal. This makes elements Connect a versatile tool for every dentist performing endodontic treatment.

Easy access to each program and the ability to quickly change operating parameters greatly simplify my work with this motor and various endodontic files, whether preparing the entrance to the canal, obtaining a glide path, or final preparation of the root canal.

The unique system of two batteries and a properly designed charger/stand guarantees the constant readiness of the motor for my work. During root canal preparation, one of the batteries can always be charged on the base, ensuring uninterrupted usage. Thanks to the quick contact charging of the spare battery, the micromotor does not have to be stored on the base at all times, it can remain available on the assistant's or on the doctor's table, ready for immediate use.

Kerr has already successfully used similar solutions in their curing lights, and the elements Connect motor continues to work perfectly in my practice. The micromotor's ability to remain readily available ensures seamless workflow. I no longer have to remember to place the motor on its stand; instead, it's always within reach whenever I need it.

elements™ Connect & Apex Connect

Cordless Endodontic Motor and Electronic Apex Locator

Your safe path

**Elevate your confidence
while enhancing patient safety.**

Greater visibility into canal depth and exceptional reliability during every shaping procedure.

Add confidence to your shaping, with elements Connect and Apex Connect. Designed to work seamlessly together to support patient safety while simplifying your procedures. The intuitive display provides real-time working length feedback to minimize error, while the motor delivers reliable performance with virtually any file system.

**All you need to support the success
of your shaping procedures from start to finish.**

& Apex Connect

Versatile Motions

With Adaptive, Reciprocation and Rotary motions in one motor, elements Connect allows offices to maintain their existing techniques and protocols.

Preset

9 Kerr preset file settings,
1 reciprocating setting and
4 customizable settings.

Continuous Use

Two removable batteries are included to ensure one is always charged so you can complete your procedures safely without interruption.

Built-in Accuracy

Ensure measurement accuracy with Apex Connect's automatic self-calibration feature that activates every time the device is turned on.

Shape with Confidence

View real-time working length information during procedures with a smart light indicator that changes color, as well as audible indicators, as you reach the apex.

Maximum Strength. Minimally Invasive

Featuring an ideal balance of strength and flexibility, ZenFlex lets you reach the full working length with reduced risk of breakage while preserving more tooth integrity.

High Cutting Efficiency

Designed with triangular cross section with proprietary heat treatment, ZenFlex exhibits high cutting efficiency that lets you reach the full working length of even complex root geometries.

Minimally Invasive

A maximum flute diameter of 1mm and a non-cutting tip work together to minimize transportation and preserve the tooth's structural integrity.

Exceptional Strength

Resists torsional stress and cyclic fatigue resulting in minimal breakage and reduced transportation.

Excellent Flexibility

Proprietary heat-treatment design delivers excellent controlled memory and flexibility for up to 90° curves.
